2003 Duramax Addendum

Application
C20066/C20066AT
Exhaust Brake

The 2003 Duramax has a pair of changes that effect the installation of the Pacbrake exhaust brake system as it is written in the existing manual . If your vehicle is a 2003, this addendum sheet will help you work around the differences.

- 1 The MIDBEC connector shown in step 16 of the installation manual has changed. Please tie into the connector indicated in Fig. 1 instead.
- 2 The cruise control activation line tapped in step 11 of the installation manual has changed. Where you used to connect to a metri-pac connector beside the steering column, there is now a cam-lock connector. Please tap the gray/white wire at position B32 as shown in Fig 2.
