SUBJECT

C10557 REPLACEMENT VALVE

This replacement valve is slightly different than the original valve used. This valve is superior in durability and actuation time.

1. The replacement valve uses 1/8" NPT ports as opposed to 1/4" NPT on the original valve. This replacement valve is pre-plumbed for your convenience.
2. The mounting hole locations will require modifications to the mounting bracket.
3. The solenoid coil has three (3) terminals. Use the two parallel terminals, one to a good vehicle ground and the other to the low position engine brake power supply. (Blue wire if a Pacbrake harness was used.)
