

Installation Manual Addendum

June 16th, 2004

IMPORTANT INFORMATION

**Pacbrake C14030 and C14045 exhaust brake kits for 2003/2004 Dodge Trucks.
Pacbrake C20066 for GM Duramax.**

Enclosed in this kit is a quick release valve to be added to the air cylinder during installation.

The purpose of the quick release valve is to exhaust the air pressure in the exhaust brake cylinder.

This addition to the kit is important to ensure the butterfly opens immediately upon acceleration.

The quick release valve is now required to facilitate a new solenoid valve provided on the air compressor.

The quick release valve supplied has one fitting installed for identification, this attaches to the port in the air cylinder.

Install the 90° fitting supplied in the kit into the quick release valve's inlet port as shown below.
